Eaton Unveils Tablet-sized UPS Touchscreen to put Power Management at Data Center Managers' Fingertips

RALEIGH, N.C. ... Diversified industrial manufacturer Eaton today announced a touchscreen metering and management display is available for North American models of the Power Xpert® 9395 uninterruptible power system (UPS). The 10-inch liquid crystal display (LCD) is one of the largest UPS touchscreens in the industry and its easy-to-use interface shares graphical energy data to help data center and facility managers better manage power consumption and costs.

“Eaton worked closely with facility managers and engineers with the goal of making it easier to manage data centers more efficiently,” said Patricia Matwijec, large systems product manager, Eaton Power Quality Division. “The touchscreen further enhances the award-winning 9395 UPS as an integrated, agile system that delivers data center performance and extensive energy usage information at a glance.”

The intuitive, industrial-grade color interface allows users to view important system conditions and operating statistics, including detailed kilowatt hour (kWh) energy consumption and savings information, in real-time graphical form to help users identify important energy usage trends. Users are also provided with simple touchscreen navigation access to event, data and service logs for a detailed system history.

Additionally, the display works seamlessly with the internal modularity features of the 9395 to allow users to retrieve information at the local UPS level, for the individual modules located within a single UPS, or for an entire system of paralleled UPSs.

Customers can also utilize the display to monitor the performance of their backup power system with access to a detailed battery log and available backup battery runtime. The display's features compliment [Eaton's eNotify Remote Monitoring service](#), which provides 24x7 real-time monitoring of UPS and battery systems by trained Eaton product technicians. eNotify allows users to identify problems before they may become load loss events, which can save money, increase power reliability and reduce the risk of critical system downtime.

The energy-efficient 9395 UPS provides backup power and scalable battery runtimes in a small footprint for large data centers, healthcare applications and other critical systems. With the Eaton Energy Saver System, the 9395 is designed to operate at 99 percent efficiency, which can enable a complete return on investment in three to five years.

The new touchscreen is available as a field upgrade for existing models. To learn more about the 9395 UPS and interact with the touchscreen, visit www.eaton.com/9395.

Eaton's electrical business is a global leader with expertise in power distribution and circuit protection; backup power protection; control and automation; lighting and security; structural solutions and wiring devices; solutions for harsh and hazardous environments; and engineering services. Eaton is positioned through its global solutions to answer today's most critical electrical power management challenges.

Eaton is a diversified power management company providing energy-efficient solutions that help our customers effectively manage electrical, hydraulic and mechanical power. With 2012 sales of \$16.3 billion, Eaton is a global technology leader in electrical products, systems and services for power quality, distribution and control, power transmission, lighting and wiring products; hydraulics components, systems and services for industrial and mobile equipment; aerospace fuel, hydraulics and pneumatic systems for commercial and military use; and truck and automotive drivetrain and powertrain systems for performance, fuel economy and safety. Eaton acquired Cooper Industries plc in 2012. Eaton has approximately 103,000 employees and sells products to customers in more than 175 countries. For more information, visit www.eaton.com.
