

UPS first responder class

When your UPS (uninterruptible power supply) goes into alarm mode, do you know how to react?

Hopefully the answer is yes. But what about the rest of your team or after-hours staff who might not be as familiar with the UPS as you are — do they know what to do? If you're not sure, then a first responder course can help get everyone on the same page.

Eaton's first responder class provides hands-on training on how to operate the UPS and identify alarm conditions. With an emphasis on practical application, it discusses fundamentals of operation, critical system failures, power flow, UPS controls and alarm functions.

Course details

Duration:

Two to three days

Location:

Eaton's training facility in Raleigh, North Carolina, or we can come to your site and conduct the training using your equipment

Get started

To schedule a training session, contact your Eaton® salesperson or our training coordinator at TrainingCoordinatorPQSORaleigh@eaton.com.
