

Eaton to Showcase Innovative Power Management and LED Lighting Solutions at Cisco Live! 2017

June 22, 2017... Eaton today announced its participation in [Cisco Live!](#), Cisco's annual information technology (IT) and communications conference taking place June 25 to 29, 2017, in Las Vegas. A Silver Sponsor, Eaton will demonstrate its comprehensive power management solutions, including [Intelligent Power Manager™](#) (IPM) software and [Visual Power Manager](#) (VPM) software, in booth 1619. Additionally, Eaton's Lighting Division, which is in alliance with Cisco's Digital Ceiling Framework, will showcase its connected LED lighting solutions powered by the [Eaton 5P rackmount compact](#) uninterruptible power supply (UPS).

Visitors to Eaton's booth at Cisco Live will get their chance to take a seat on the legendary [ePDU G3 Throne](#), a nearly seven-foot throne comprised primarily of Eaton power distribution units (PDUs). While in the booth, attendees can attend presentations from Eaton Alliance partners, such as Cisco, Dell/EMC and NetAPP, and solution provider partners, such as CDW, Ingram Micro and Tech Data. Finally, visitors can receive hands-on demonstrations of Eaton's latest power management solutions on display, including:

- **Lithium Ion UPS:** The first in its class, Eaton's new Lithium Ion-powered UPS will deliver twice the battery life of a standard UPS while providing a reliable, safe and flexible solution designed to enable 24/7 uptime.
- **Visual Power Manager Software:** Eaton's easy-to-deploy VPM software enables customers to visually monitor large centralized or distributed power infrastructures, helping to maintain business continuity in data centers of all sizes and types.
- **Intelligent Power Manager Software:** Eaton's flagship power management software enables Cisco users to automate policy-based remediation, manage off-site HyperFlex and Cisco UCS systems through a single interface and mitigate environmental risk through load shedding and power capping.

Eaton's Lighting Division powers Cisco's Digital Ceiling Framework, allowing companies to combine multiple building systems via a single IP network. Connecting Cisco's IT infrastructure through Eaton's advanced light-emitting diode lighting solutions, results in a building that is not only smart, but is seamlessly and securely connected while lowering costs. Eaton has the

Powering Business Worldwide

Media Brief

industry's broadest breadth and depth of connected LED luminaires for use in Cisco's Digital Ceiling, allowing Eaton to meet virtually every lighting application need.
