Eaton's Intelligent Power Manager Software delivers enhanced power management capabilities for Nutanix hyperconverged infrastructure

RALEIGH, N.C. ... Power management company Eaton today announced the global launch of its Intelligent Power Manager™ (IPM) software version 1.60, which now offers full integration with the Nutanix Acropolis hyperconverged infrastructure platform. Through the integration, users of Nutanix Acropolis, including information technology (IT) professionals and data center managers, can now leverage Eaton's IPM software to provide graceful shutdown of the Nutanix infrastructure, enhancing business continuity and protecting mission critical data during power-related events.

"IT and data center professionals increasingly look to hyperconverged infrastructure as an opportunity to lower costs and consolidate IT resources," said Hervé Tardy, vice president and general manager, Distributed Power Solutions, Eaton. "Nutanix has emerged as an innovator in providing hyperconverged solutions and Acropolis has become a leading platform for professionals looking to reduce complexity in managing their deployments. By integrating our IPM software with Acropolis, users gain enhanced control of power infrastructure for Nutanix deployments while protecting essential data from unplanned incidents."

Nutanix Acropolis combines feature-rich software-defined storage with built-in virtualization in a turnkey hyperconverged infrastructure solution. Through integration with Eaton's Intelligent Power Manager software, Acropolis users can now provide remote shutdown capabilities for the Nutanix Acropolis Hypervisor (AHV) during unforeseen power events to avoid a loss of data or its integrity.

In addition to integration with Nutanix Acropolis, the latest version of Eaton's Intelligent Power Manager software features integration with VMware® vSAN hyper-converged infrastructure

software as well as the Microsoft Hyper-V virtualization platform. These integrations enable operators in vSAN environments to efficiently and effectively manage their power infrastructure as part of their vSAN deployments or Hyper-V hypervisors.

Eaton's electrical business is a global leader with expertise in power distribution and circuit protection; backup power protection; control and automation; lighting and security; structural solutions and wiring devices; solutions for harsh and hazardous environments; and engineering services. Eaton is positioned through its global solutions to answer today's most critical electrical power management challenges.

Eaton is a power management company with 2017 sales of \$20.4 billion. We provide energy-efficient solutions that help our customers effectively manage electrical, hydraulic and mechanical power more efficiently, safely and sustainably. Eaton is dedicated to improving the quality of life and the environment through the use of power management technologies and services. Eaton has approximately 96,000 employees and sells products to customers in more than 175 countries. For more information, visit [Eaton.com](https://www.eaton.com).
